

About Netafim™

Netafim™, the pioneer and global leader in drip irrigation, is one of the world's leading low volume irrigation systems companies. A committed member of the Israel Bio-Organic Agriculture Association (IBOAA) and the International Federation of Organic Agricultural Movements (IFOAM), Netafim™ is actively involved in worldwide efforts to protect the environment and enhance the quality of life on our planet. Organic farming is, therefore, a key area of importance in our corporate strategy. For this reason, we continue to channel our vast experience and scientific resources into developing innovative irrigation solutions to produce best organic yield, while restoring soil fertility to its natural state.

Country	Name & Address	Telephone & E-mail
Argentina	Netafim Argentina S.A. California 1275, 1168 Capital Federal, Argentina	Tel:+54 11 4303 3733 E-mail:netafim@netafim.com.ar
Australia	Netafim Australia PTY Ltd. Melbourne - Head Office, 213-217 Fitzgerald Road, Laverton North, Vic. 3026, P.O. Box 248, Laverton Vic 3028, Australia	Tel:+61 3 93698777 E-mail:info@netafim.com.au
Brazil	Netafim Brazil Ltd. Rua Salvador Scaglioni, 135 JD. Orestes Lopes de Camargo, Ribeirao Preto - SP, CEP 14066-446, Brazil	Tel:+55 16 2111 8011 E-mail:netafim@netafim.com.br

Ethanogation™ Irrigation for Ethanol Crops

BIOFUEL

 **NETAFIM™**

The Biofuel Future

As the world's fuel resources such as coal and oil are gradually depleting, Biofuel offers a smart and attractive alternative. Farmers trying to maintain stable crop growth face growing challenges such as scarce water resources and weather fluctuations. This means the Biofuel industry now stands at a critical crossroads. As demand for a constant supply of quality raw materials grows, growers themselves are looking for ways to base their production on a reliable water supply.

The future of Biofuel crops in industry now increasingly depends on a regular water supply that balances environmental protection with improved agricultural practices. The Biofuel industry needs to integrate the multidisciplinary fields of genetics with agronomic and economical evaluations. Most crops for energy production can be cultivated under irrigated or rain-fed conditions and an optimal irrigation regime can almost double the yield from maize, sugarcane, sugar beet and more.

Netafim's Ethanogation™ Expertise

- Netafim™ are Biofuel experts with extensive knowledge and experience in producing Biomass that produces Ethanol.
- We have over 20 years experience utilizing efficient water scheduling through drip irrigation together with adequate Nutrigation™ in order to create more Biomass per hectare of land.
- Our Agriculture Department has successfully cultivated sugarcane, sugar beet, corn and other "energy" crops in diverse climates and growing conditions worldwide.
- We have enabled sugar factories and growers to achieve potential sugarcane yields of 140 to 200 tons per hectare.

Netafim's Ethanogation™ Team

- As global demand for Ethanol rapidly spreads, Netafim™ has created a special Biofuel Team to develop energy crops.
- The team includes professionals from South Africa, Brazil, India and other global environments who are specialists in cultivation, soil, irrigation systems, Nutrigation™ and plant protection.
- The team offers a knowledge-sharing platform to help growers searching for ways to improve yields.
- The team's job is to provide quick and professional answers to global field problems and queries.

Environmental Irrigation

At Netafim™, irrigation is our business yet caring for the environment is our key priority as we constantly seek solutions to nature's global challenges such as:

- Preventing water resources depletion
- Preventing groundwater pollution
- Preventing soil erosion and loss of fertility
- Protecting fresh water sources
- Saving energy
- Promoting bio-organic farming

Environmental Drip Irrigation integrates agricultural and ecological concerns at their most optimized levels. By adopting the Environmental Irrigation concept, the Biofuel industry, would be far more effective in meeting two all-important goals:

- **Ensure regular supplies of Ethanol needed by the industry**
- **Help correct growing imbalances in our environment**
