

Netafim's Engineering & Projects Division

Irrigation-based project management that ensures sustainable systems and profitable farming

Today's agricultural produce market is fiercely competitive

The key to success in a tough market is through improving the sustainability and productivity of agricultural systems. For this, you need a multi-disciplinary enterprise able to handle projects of every size using field-proven knowledge and global experience.

Netafim's Engineering & Projects Division has all the resources to help you establish a profit generating agro-business.

We're both local and global

Netafim's Engineering & Projects Division combining international know-how with local experience, has a visible presence in its nine service and planning centers around the world.

We're backed by forty years of hands-on experience in providing project management services to irrigation-based development projects for growers worldwide.

Our fields of expertise

- Irrigation systems specifications based on crop, climate and natural resources
- Design of complete irrigation based projects, water delivery pipelines, reservoirs, pumping stations, filtration, control and automation, drip systems, sprinkler systems, center pivot systems
- Preparation of tendering documents
- Systems procurement and installation
- Operation and maintenance of irrigation systems
- On-site training in irrigation scheduling and fertigation

How we work

We do a lot more than provide equipment. Our full scope of services includes feasibility study, operations and maintenance. All project deliverables combine engineering works with agronomical support to ensure agricultural success and bottom line profitability.
